

## Project Profile

BJ Services

Tomball, Texas

### Client Overview

BJ Services provides cementing, stimulation, downhole tools and coiled tubing services to oil and gas companies worldwide. BJ also provides tubular services, process and pipeline services and specialty chemical services in selected geographic markets.

### Project Overview

BJ outgrew their existing space and chose to upgrade into this new state-of-the-art 130,000 square foot facility designed and constructed on a curved 626-foot radius. LCS served as the lab consultant, programmer and builder for the 32,000 square feet of laboratory space. LCS collaborated with both interior decorators and end users to design the layout, functionality and aesthetics in 23 individual laboratories.

LCS craftsmen installed 3,000 linear feet of casework specially designed to fit the building's curved shape. LCS plumbers installed over 54,000 linear feet of plumbing piping and fixtures for both laboratory and domestic use. A total of 40 fume hoods and exhaust systems were also installed.

BJ Services realized the unique curved shape of their laboratory would present specific challenges to their builder. Having worked with LCS before, they elected to leverage the proven combination of both design and construction to develop and deliver effective, attractive solutions.
