

Project Profile

Baker Petrolite

Santa Fe Springs, CA

1,500,000

Completed March. 2008

Baker Petrolite

Client Overview

Baker Petrolite, a subsidiary of Baker Hughes, delivers advanced drilling technologies and services that deliver efficient and precise well placement. Major company capabilities include directional drilling, measurement-while-drilling (MWD), logging-while-drilling (LWD), drilling fluids, coring systems and well-site information management services

Project Overview

Demolition of four existing structures and the planning, development, design, and construction of a new ground up 7,200 square foot block facility consisting of office, sample testing lab, and dry storage warehouse space. The project was completed utilizing a phased approach as occupancy was required during construction. The facility will be used for the distribution of chemicals to support local oil field operations.
